

# Credits

People ask for credits in their file code, but it may be not that practical if we are using several code from different projects. The most logic thing to do is put all credits in one page. As most project do.

## Graph App

Found this project that have a working interface it explain many things, like a control. Worth study the code, added most of it's code to refactor, study and adapt. The original code will not be used, is for reference only.

## Lips of Suna

Added the project because it add costume model loader for .blend files.
